

•MG Crest Key Cutting Instructions•

#P1028

1. First check that your key blank fits into your lock.
2. Take key blank to your local locksmith to have cut. Usual charge is \$1.00.
3. NOTE for AA2 keys: you may notice a difference in length between your present key and the MG Crest key. This is fine so long as you instruct the locksmith to set-up your keys from the tip, not from the shoulder. This allows the locksmith to mill the shoulder area and effectively make the key longer.

Key Type Chart

FA or MRN: fit T-types. Check ID letters on your lock barrel face.
